The music function in the Heise RGB app allows the lights to pulse in sync with the music. Below are the details on how to use this function for both Apple iOS and Android.
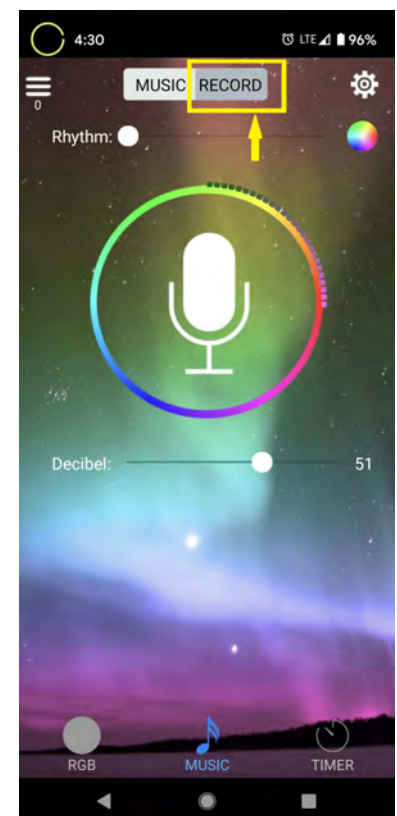

Apple iOS

Playing music from phone

1)   Select the music "note" function in the bottom center of the screen.

2)   Select the 3 bar playlist icon from to the right of the play controls.

3)   Here the desired music files can be selected to be played. Please note, the music **must be stored locally on the phone** to populate in the app. Only music stored locally on the phone can be used to sync. This function will not work with any streaming audio.

Music played from a different device

1)   Select the music "note" function in the bottom center of the screen.

2)   Select "Record" in the top center.

3)   The app will use the microphone to listen to ambient music and sound. The app will sync the lights to the audio detected. Note, ambient noise will affect the functionality. Sliders in the app can be used to adjust the sensitivity and pulse rate.
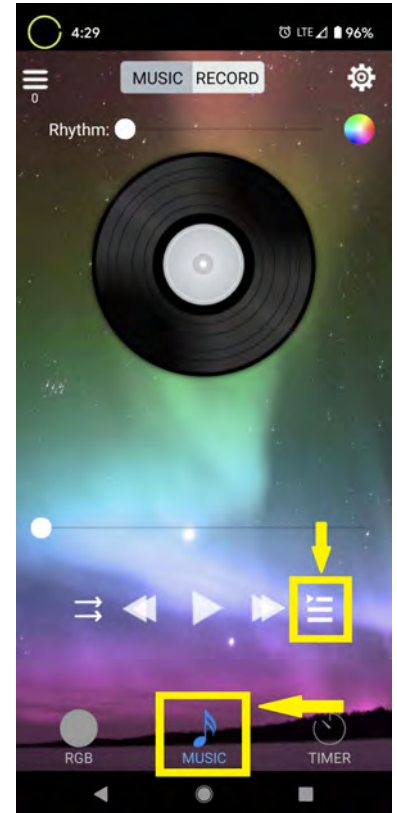

Android

Playing music from phone

1)   Select the music "note" function in the bottom center of the screen.

2)   Select the 3 bar playlist icon from to the right of the play controls.

3)   Here the desired music files can be selected to be played. Please note, the music **must be stored locally on the phone** to populate in the app. Only music stored locally on the phone can be used to sync. This function will not work with any streaming audio.

Music played from a different device

1)   Select the music "note" function in the bottom center of the screen.
